PROPOSAL

DISA Cybersecurity Service Provider (CSSP) / J34 — External Vulnerability Scans (EVS) and Web Vulnerability Scans (WVS)

Prepared for:

Location: Detroit, MI

Date: November 09, 2026

Prepared by: Carl E. Jones III

Hidden Leaf Networks LLC — Detroit, Michigan — hiddenleafnetworks.com

SOURCES SOUGHT RESPONSE

Date: November 09, 2026 **Reference:** 832775912 **Subject:** DISA Cybersecurity Service Provider (CSSP) / J34 — External Vulnerability Scans (EVS) and Web Vulnerability Scans (WVS) **NAICS Code:** 541511

To: Ashley Cline **Email:** ashley.m.cline6.civ@mail.mil

From: Carl E. Jones III, Founder & Principal Hidden Leaf Networks, LLC Detroit, Michigan carl@hiddenleafnetworks.com https://www.hiddenleafnetworks.com

1. Company Identification

Field	Value
Legal Name	HIDDEN LEAF NETWORKS, LLC
CAGE Code	26PF4
UEI	X6B2SPZ64KP3
SAM.gov Status	Active
Business Size	Small Business
Business Type	Single-Member LLC
Primary NAICS	541512 — Computer Systems Design Services
Additional NAICS	541519, 541511
Location	Detroit, Michigan
Year Established	2025

2. Capability Overview

Hidden Leaf Networks, LLC (HLN) is a Detroit-based small technology firm with developing capabilities in cybersecurity tooling, vulnerability workflow management, and AI-augmented security operations. While HLN acknowledges that large-scale External Vulnerability Scanning (EVS) and Web Vulnerability Scanning (WVS) at DISA's operational scale requires a substantial technical footprint, HLN brings

unique value as a software and tooling developer capable of supporting CSSP infrastructure through automated findings management, AI-assisted triage, and security workflow orchestration.

Core Capabilities Relevant to This Requirement:

- Cybersecurity workflow platform development — findings ingestion, triage automation, remediation tracking, and compliance documentation
- API integration with industry-standard vulnerability scanning tools (Nessus/Tenable, Qualys, OWASP ZAP) for data aggregation and reporting
- Web application security assessment tooling — OWASP Top 10 methodology, secure code review practices, and security-focused automated testing
- AI-assisted vulnerability prioritization and risk scoring — leveraging LLM-based analysis to accelerate analyst workflows
- Secure software development lifecycle (SSDLC) practices — STIG-aware development, secrets management, and least-privilege architecture
- Dashboard and reporting tooling for security operations centers — customizable findings views, trending analysis, executive reporting

HLN's **HLN Relay** platform was architected specifically for collaborative cybersecurity workflows — it features a multi-stakeholder findings management interface, AI governance layer for analyst assistance, and role-based access controls designed for security team environments. This directly maps to CSSP operational support requirements.

3. Relevant Experience

HLN is a newly established LLC without federal contract past performance. The principal engineer's background directly informs HLN's cybersecurity tooling direction:

Carl E. Jones III — Founder & Principal Engineer

- 12+ years in software quality assurance and systems engineering — translatable to security testing methodology and defect lifecycle management
- Enterprise systems engineering at Ford Motor Company — large-scale vulnerability tracking and quality gate enforcement across complex software delivery pipelines
- Full-stack security-aware application development: Python, TypeScript, Docker, PostgreSQL — with emphasis on input validation, authentication hardening, and least-privilege design

- Active development of HLN Relay cybersecurity platform — a 3-layer collaborative security workflow tool with Nexus Flow orchestration engine and ARIA AI governance integration
- Familiarity with NIST 800-53, FISMA, and DoD cybersecurity frameworks as reference architecture for platform design
- Automated testing infrastructure — 500+ test cases across HLN platforms — demonstrating quality assurance rigor applicable to security tooling validation

HLN is transparent that large-scale EVS/WVS scan execution at DoD enterprise scale is not a current operational capability. HLN's value in this environment is as a tooling developer, workflow integrator, and subcontractor supporting a prime CSSP vendor.

4. Teaming Arrangements

HLN is specifically interested in this opportunity as a **subcontractor or teaming partner** to an established CSSP vendor. HLN offers:

- Rapid development of custom tooling to extend existing CSSP platforms
- AI/ML workflow components to augment analyst capacity
- Web application scanning tooling development and integration
- Dashboard and reporting system development for findings visualization

HLN actively seeks introductions to prime contractors holding or pursuing DISA CSSP vehicles. We are open to teaming conversations with both large and small business primes.

5. Questions for the Contracting Officer

1. Is DISA anticipating this as a single-award or multiple-award vehicle, and will it be structured to allow prime/subcontractor teaming arrangements?

2. What is the anticipated clearance level requirement for personnel performing EVS/WVS work — Public Trust, Secret, or TS/SCI?

3. Will the requirement include tooling development and platform integration work alongside scan execution, or is it limited to scan delivery and reporting?

4. Does DISA anticipate any set-aside components (e.g., small business reserve under a multiple-award structure)?

5. Are there existing approved scanning tool lists or DISA-authorized tool catalogs that vendors must draw from, or is there flexibility in tooling selection?

6. Interest Level

Hidden Leaf Networks, LLC expresses **conditional interest** in this opportunity — specifically as a subcontractor or teaming partner focused on cybersecurity tooling development, findings workflow automation, and AI-augmented analyst support. HLN is a registered small business under NAICS 541511 and 541512.

HLN is prepared to discuss teaming arrangements, provide a capability briefing on HLN Relay, or connect with prime contractors pursuing this vehicle.

Respectfully submitted,

Carl E. Jones III
