PROPOSAL

MCC Software Development Recompete

Prepared for:

Location: Detroit, MI

Date: November 09, 2026

Prepared by: Carl E. Jones III

Hidden Leaf Networks LLC — Detroit, Michigan — hiddenleafnetworks.com

SOURCES SOUGHT RESPONSE

Date: November 09, 2026 **Reference:** 95332427K0001 **Subject:** MCC Software Development Recompete **NAICS Code:** 541512

To: Merle Phillips / Maxwell Sarpong **Email:** softwaredev@mcc.gov **Phone:** (202) 772-6319 / (202) 521-7212

From: Carl E. Jones III, Founder & Principal Hidden Leaf Networks, LLC Detroit, Michigan carl@hiddenleafnetworks.com https://www.hiddenleafnetworks.com

1. Company Identification

Field	Value
Legal Name	HIDDEN LEAF NETWORKS, LLC
CAGE Code	26PF4
UEI	X6B2SPZ64KP3
SAM.gov Status	Active
Business Size	Small Business
Business Type	Single-Member LLC
Primary NAICS	541512 — Computer Systems Design Services
Additional NAICS	541519, 541511
Location	Detroit, Michigan
Year Established	2025

2. Capability Overview

Hidden Leaf Networks, LLC (HLN) is a Detroit-based small technology firm specializing in custom software development, AI-powered application architecture, and international program delivery tooling. HLN builds production-grade systems across the full stack — from cloud-native backend APIs to mission-driven web platforms — with particular strength in applications requiring data integrity, user

accountability, and multi-stakeholder workflow management.

MCC's software requirements sit at the intersection of international development accountability and modern digital delivery — a domain where HLN's combination of custom application development, automated testing rigor, and intelligent workflow orchestration directly applies.

Core Capabilities Relevant to This Requirement:

- Full-stack application development: Python (FastAPI), TypeScript, Node.js, React/Next.js
- Cloud-native architecture on AWS/GCP — containerized microservices, CI/CD pipelines, infrastructure-as-code
- Multi-tenant application design with role-based access controls and audit logging
- AI-assisted data processing, document analysis, and reporting automation
- Software quality assurance and automated test suite development (unit, integration, end-to-end)
- API development and third-party system integration (REST, GraphQL, webhooks)
- Agile/Scrum delivery with structured sprint planning, retrospectives, and stakeholder-facing documentation
- Section 508 accessibility compliance in web application development

HLN's flagship platform **HLN Relay** demonstrates direct architectural overlap with MCC's software environment — a multi-stakeholder workflow management system with governance layers, audit trails, and role-adaptive interfaces designed for complex operational coordination. HLN also operates **Scroll**, a multi-engine AI orchestration runtime with 500+ automated tests, illustrating HLN's commitment to production-quality, test-driven delivery.

3. Relevant Experience

HLN is a newly established LLC without federal contract past performance. The principal engineer brings over 12 years of applicable experience:

Carl E. Jones III — Founder & Principal Engineer

- 12+ years in software quality assurance, test automation, and systems engineering
- Enterprise QA engineering experience at Ford Motor Company — large-scale test automation, defect tracking, and cross-functional systems integration
- Full-stack development across Python, TypeScript, React, FastAPI, Docker, PostgreSQL, Redis
- Multi-tenant SaaS architecture design with RBAC, audit logging, and workflow state machines

- AI/ML pipeline development — multi-model orchestration, autonomous agent frameworks, structured data extraction from unstructured documents
- Experience building program management tooling for multi-stakeholder environments (grant management, compliance reporting, operational scheduling)

HLN is actively developing tooling relevant to MCC's international program delivery context, including workflow orchestration systems that manage accountability chains across distributed teams.

4. Teaming Arrangements

HLN is actively pursuing teaming partnerships for this opportunity and would welcome conversations with established federal IT contractors seeking an agile, technically deep small business subcontractor or teaming partner. HLN's strengths in rapid application development, AI integration, and test automation complement larger primes' program management and clearance-holding capacity.

HLN is also open to mentor-protégé arrangements with large businesses that have existing MCC contract vehicles or relationships.

5. Questions for the Contracting Officer

1. Is this requirement anticipated to be set aside for small business, or will it be a full and open competition? Given MCC's small agency footprint, would an 8(a) or SB set-aside be considered?

2. What is the anticipated contract type and period of performance (e.g., IDIQ with task orders, FFP, T&M;)?

3. Can MCC share high-level information about the current technology stack (languages, frameworks, cloud environment) to allow vendors to better assess fit and staffing?

4. What performance work statement or statement of objectives will govern this recompete — will the scope be substantially similar to the incumbent's work, or is MCC anticipating a modernization or platform migration?

5. Does MCC anticipate requiring any security clearances (Public Trust, Secret) for this effort, and at what investigation level?

6. Interest Level and Set-Aside Recommendation

Hidden Leaf Networks, LLC expresses **strong interest** in the MCC Software Development Recompete. HLN's production software delivery capabilities, test-driven engineering culture, and emerging AI workflow tooling position it well to support MCC's digital operations either as a prime or in a teaming arrangement.

HLN recommends MCC evaluate a **Small Business Set-Aside** under NAICS 541512, given the breadth of technically capable small firms available in this space.

HLN is prepared to provide a capability briefing, technical demonstration, or additional documentation upon request.

Respectfully submitted,

Carl E. Jones III
