From: Carl E. Jones III, Founder & Principal Hidden Leaf Networks, LLC Detroit, Michigan carl@hiddenleafnetworks.com https://www.hiddenleafnetworks.com

1. Company Identification

Field	Value
Legal Name	HIDDEN LEAF NETWORKS, LLC
CAGE Code	26PF4
UEI	X6B2SPZ64KP3
SAM.gov Status	Active
Business Size	Small Business
Business Type	Single-Member LLC
Primary NAICS	541512 — Computer Systems Design Services
Additional NAICS	541519, 541511
Location	Detroit, Michigan
Year Established	2025

2. Capability Overview

Hidden Leaf Networks, LLC (HLN) is a Detroit-based small technology firm providing web application development, content management system (CMS) implementation, and cloud-native hosting architecture. This combination — sustained web platforms, structured content governance, and cloud infrastructure — is HLN's operational core. HLN builds and maintains production web properties for

mission-driven organizations, delivering accessible, performant, and maintainable platforms under ongoing care arrangements.

Defense Human Resources Activity's requirement for web sustainment, CMS, and cloud hosting maps precisely to HLN's commercial delivery model, applied to a federal context with DISA STIG compliance, Section 508 accessibility, and FedRAMP-authorized cloud hosting requirements.

Core Capabilities Relevant to This Requirement:

- Web application development and sustainment: Next.js, React, TypeScript — modern, maintainable front-end architecture with long-term support considerations
- Content management system implementation and configuration — headless CMS patterns (content APIs + decoupled front-end) enabling non-technical content editors
- Cloud hosting architecture on FedRAMP-authorized platforms (AWS GovCloud, Azure Government) — containerized deployments, managed database services, CDN configuration
- CI/CD pipeline implementation — automated deployment, rollback capability, environment promotion (dev → staging → production)
- Section 508 / WCAG 2.1 AA accessibility compliance — built into development process, not added after the fact
- Performance optimization — Core Web Vitals tuning, caching strategy, image optimization, load testing
- Security-aware web development — HTTPS enforcement, CSP headers, input sanitization, dependency auditing, OWASP Top 10 mitigations
- Ongoing sustainment services — bug triage, feature additions, content updates, security patching, uptime monitoring

HLN's commercial web development portfolio includes multiple production deployments for nonprofit and community organizations, managed under monthly care plan agreements. This sustainment-first operational model directly mirrors what DHRA requires — not just initial build, but accountable ongoing maintenance under defined SLAs.

3. Relevant Experience

HLN is a newly established LLC without federal contract past performance. The principal engineer brings over 12 years of applicable web development experience:

Carl E. Jones III — Founder & Principal Engineer

- Web development since 2006 across commercial, nonprofit, and enterprise contexts
- Production web platforms under active sustainment for multiple clients — structured content management, monthly maintenance cycles, accessibility reviews
- Full-stack development: Next.js 16, React, TypeScript, Node.js, Python, PostgreSQL, Redis
- Cloud deployment experience: Docker, container orchestration, managed cloud services, CDN configuration, DNS management
- CMS implementation experience: headless CMS patterns, structured content modeling, editorial workflow configuration for non-technical users
- Section 508 accessibility implementation — semantic HTML, ARIA attributes, keyboard navigation, screen reader testing
- Automated testing for web applications — unit tests, integration tests, end-to-end browser testing (500+ tests across active HLN platforms)

Representative Commercial Projects:

- **KYC Doggz (kycdoggz.com):** Production web platform under active sustainment — full-stack Next.js deployment with ongoing monthly care plan
- **Generous Giving (generousgiving.org):** Nonprofit web platform, production-deployed, 501(c)(3) compliant, content-managed editorial layout, funding partner integrations
- **Temple Soul Care LLC (templesoulcare.com):** Service business web platform, mobile-responsive, deployed and under sustainment
- **Christ Temple Baptist Church (CTBC):** 13-page Phase 1 redesign in progress — audited existing Wix platform, designing modern Next.js migration

4. Teaming Arrangements

HLN is interested in this opportunity either as a prime or subcontractor. As a small business with demonstrated web sustainment delivery capabilities, HLN is well-positioned to prime a small business set-aside. HLN would also welcome teaming with established federal IT firms seeking a web development and sustainment-focused small business partner.

HLN offers agile responsiveness that larger integrators often cannot match — direct principal access, same-week turnaround on routine content updates, and no bureaucratic overhead for routine sustainment tasks.

5. Questions for the Contracting Officer

1. What is the anticipated scale of this requirement — number of web properties, total pages under management, monthly content update volume, and estimated concurrent user load?

2. Is DHRA operating on a government-managed cloud environment (AWS GovCloud, Azure Government) or a commercial cloud, and are there existing FedRAMP ATOs in place for the hosting infrastructure?

3. What CMS platform(s) is DHRA currently using, and is the requirement to sustain the existing platform or to migrate to a new one?

4. Is this anticipated to be a small business set-aside? Given the scope described, HLN believes this is well-suited for a Total Small Business Set-Aside under NAICS 541511.

5. What are the expected SLA requirements for incident response (e.g., critical bug response time, planned downtime windows, uptime percentage targets)?

6. Interest Level and Set-Aside Recommendation

Hidden Leaf Networks, LLC expresses **strong interest** in this requirement. Web sustainment, CMS management, and cloud hosting is HLN's primary commercial delivery model — this is not a stretch capability but a direct application of ongoing operational work to a federal context.

HLN recommends DHRA pursue a **Total Small Business Set-Aside** under NAICS 541511, and is prepared to prime this effort or participate in a teaming arrangement.

HLN is prepared to provide portfolio demonstrations, discuss technical approach, or participate in any industry day or one-on-one sessions offered.

Respectfully submitted,

Carl E. Jones III
